2. 概述

2.1 编写目的

介绍hichip平台下的jg9151s3a触摸按键的使用;

2.2 读者对象

hichip软件开发工程师和技术支持工程师。

3. 模块介绍

• 通过i2c协议获取jg9151s3a触摸按键的键值,并将对应按键通过input上报给上层;

4. linux

4.1 模块接口说明

4.2 模块测试用例与Sample Code

1

4.2.1 开启模块

4.2.2 设备树的配置

4.2.3 编译

5. rtos

5.1 模块接口说明

1、可以通过read函数读取/dev/input/eventN获得键值;

5.2 模块测试用例与Sample Code

```
static int input_test(int argc, char *argv[])
 2
    {
 3
            int fd;
 4
            struct input_event t;
 5
            struct pollfd pfd;
            char input_buf[BUF_SIZE];
 6
 7
            char *s = "/dev/input/event0";
 8
 9
            long tmp;
10
11
            fd = open(input_buf, O_RDONLY);
12
            pfd.fd = fd;
13
            pfd.events = POLLIN | POLLRDNORM;
14
            if (fd < 0) {
15
16
                     printf("can't open %s\n", input_buf);
17
                     return -1;
18
            }
19
20
            while (1) {
21
                     if (poll(&pfd, 1, -1) \le 0)
22
                             continue;
23
                     if (read(fd, &t, sizeof(t)) != sizeof(t))
24
25
                             continue;
26
                     printf("type:%d, code:%d, value:0x%lx\n", t.type, t.code,
27
28
                            t.value);
29
            }
30
31
            close(fd);
32
33
            return 0;
34 }
```
