2. 文档履历

版本号	日期	制/修订	制/修订记录
1.0	2023.04.10	邱浩佳	新增说明文档
2.0	2023.04.23	邱浩佳	支持在初始化的时候设置占空比和周期
3.0	2023.04.25	邱浩佳	取消在初始化时设置占空比和周期,以及在不同阶段避免多次初始化
4.0	2023.08.14	邱浩佳	新增极性设置
5.0	2023.09.09	邱浩佳	新增可配置pwm范围选择

3. 概述

3.1 编写目的

指导和介绍pwm的使用和开发

3.2 读者对象

软件开发工程师和技术支持工程师。

4. 模块介绍

- rtos的pwm模块区分15xx系列和16xx系列的芯片,15xx系列的芯片有3路pwm通道;16xx系列的芯片有6路pwm通道
- 当前驱动下,pwm的最大clk为27M,27M时钟下最大频率的周期为37ns。
- 支持在驱动初始化时设置占空比和周期。

4.1 设备树配置

以pwm0为例子:

```
pwm@0 {
    pinmux-active = <PINPAD_L23 1>;
    devpath = "/dev/pwm0";
    polarity = <1>;
    status = "okay";
};
```

pinmux-active:将要设置的引脚PINPAD_L23配置成pwm模式,并不是配置成pwm的值都写为1,具体的引脚配置成pwm请查看具体配置根据所使用引脚参考components/kernel/source/include/uapi/hcuapi/pinmux/hc15xx_pinmux.h和components/kernel/source/include/uapi/hcuapi/pinmux/hc16xx_pinmux.h。

devpath: 生成的pwm节点的路径。

polarity:初始化完pwm后通道的极性。0:低电平;1:高电平;

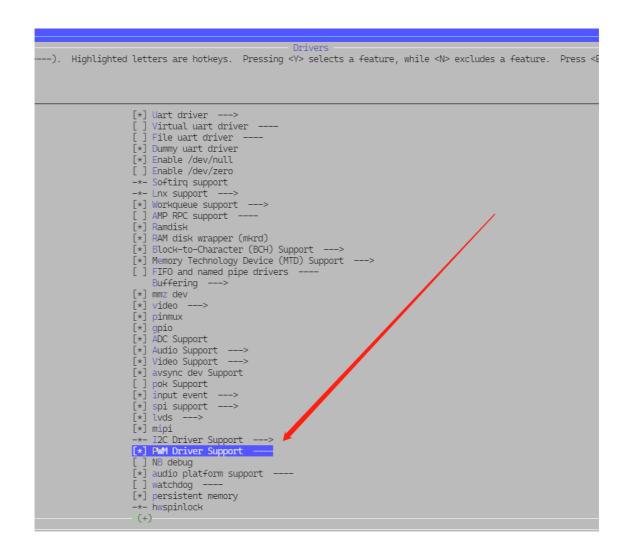

status:状态为okay代表启用;disabled代表不启用。

pwm的占空比和频率均通过代码设置,请参考sample code。

4.2 menuconfig配置

在SDK根目录输入make menuconfig,安装下面路径进行选中pwm

```
1 Location:
2 -> Components
3 -> kernel (BR2_PACKAGE_KERNEL [=y])
4 -> Drivers
```

4.2.1 pwm频率范围选择

为了满足pwm拥有0-100%,每个可调节level为1%的需求,可以设置pwm范围内的值,但也可以设置超过范围最大值的频率,只是可调节的level不确定,根据所配置的频率变化。

当只使用一个通道时,可以配置CONFIG_RANGE_AUTO_SET,分频系数会自动计算。,但超过该分频系数的范围时,可调节level不确定。

```
About How to calculated PWM frequency
freq = 27M / (div * (h val + l val));
h_val = duty_ns / div /37;
l val = (period ns - duty ns) / div /37;
To meet the adjustable level of 1%,
the h val and l val have following requirements:
       Max(h_val + l_val) = 65535;
       Min(h_val + l_val) = 100;
the div can set in make menuconfig:
       CONFIG_RANGE_411Hz_270KHz: div = 1;
        CONFIG_RANGE_206Hz_135KHz: div = 2;
        CONFIG_RANGE_103Hz_67KHz : div = 4;
        CONFIG RANGE 50Hz 33KHz : div = 8;
        CONFIG_RANGE_AUTO_SET
                                : when use only one channel ,
                                  div will auto calculated to meet with the frequency you set;
if div = 1; the rang is 411(Hz)-270(KHz),
you can set bigger than 270(KHz), but adjustable level may not be 1%;
Prompt: Select pwm frequency range
 Location:
    -> Components
     -> kernel (BR2_PACKAGE_KERNEL [=y])
         -> PWM Driver Support (CONFIG_PWM_DRIVER [=y])
  Defined at pwm:6
  Depends on: BR2 PACKAGE KERNEL [=y] && CONFIG PWM DRIVER [=y]
  Selected by [m]:
  - BR2_PACKAGE_KERNEL [=y] && CONFIG_PWM_DRIVER [=y] && m
```

配置完成后输入make kernel-rebuild all,进行编译和烧录,在串口控制台输入下面命令既可以查看pwm节点。

```
hc1512a@dbB200#
hc1512a@dbB200# nsh
hc1512a@dbB200(nsh)# ls

```

4.3 测试命令

在SDK根目录输入make menuconfig,根据下面路径选中pwm_test命令。

```
Location:
-> Components
-> Cmds (BR2_PACKAGE_CMDS [=y])
```

```
--). Highlighted letters are hotkeys. Pressing <Y> selects a feature, while <N> excludes a feature. Pres
                       - Cmds
                    [*] OS operations --->

                         sorting test operations
USB setting operations
                      ] vin dvp test perations
                         pwm test
wifi test
                         MIPI test commands
```

配置完成后,输入make cmds-rebuild all,进行编译和烧录,在串口控制台输入下面命令即可以使用测试命令。

5. 模块接口说明

5.1 接口函数

本模块提供ioctl函数接口供应用层使用。

• 设置pwm的参数,包括占空比、周期和极性。注意占空比和周期的单位是ns。

```
info.polarity = polarity;
info.period_ns = period_ns;
info.duty_ns = duty_ns;
ioctl(fd, PWMIOC_SETCHARACTERISTICS, (unsigned long)&info);
```

• 获取pwm的参数,包括占空比、周期和极性。注意占空比和周期的单位是ns。

```
info.polarity = polarity;
info.period_ns = period_ns;
info.duty_ns = duty_ns;
ioctl(fd, PWMIOC_GETCHARACTERISTICS, (unsigned long)&info);
```

• 开启pwm和关闭pwm。

```
1 ioctl(fd, PWMIOC_START);
2 ioctl(fd, PWMIOC_STOP);
```

6. 模块测试用例与Sample Code

代码存放路径为: components/cmds/source/pwm/pwm_test.c。注意占空比和周期的单位是ns。

```
1 #include <stdio.h>
2 #include <unistd.h>
3 #include <fcntl.h>
4 #include <poll.h>
5 #include <signal.h>
6 #include <stdlib.h>
7
   #include <string.h>
8 #include <getopt.h>
9 #include <sys/ioctl.h>
10 #include <hcuapi/pwm.h>
#include <kernel/lib/console.h>
12
13 | static void print_usage(const char *prog)
           printf("Usage: %s \n", prog);
15
           16
17
          " -d --duty_ns set duty_ns\n"

" -P --ploarity set ploarity\n"
18
19
           " -S --stop stop pwm device id\n");
20
21
22
23 | static int pwm_test(int argc, char *argv[])
24
```

```
25
        int fd;
        int id = 0;
26
